

Actionable Regulatory Intelligence

Real-Time Impact Analysis. Turning complex legal updates into clear, immediate policy actions.

THE PROBLEM

1

VALIDATED PROBLEM

Based on interviews with industry leaders

Fragmented Monitoring

Compliance officers rely on scattered sources like newsletters and expensive external legal counsel. There is no single source of truth.

2

Manual Comparisons

Manually comparing texts in Excel to start the "gap analysis" is time-consuming, inefficient, and prone to errors.

3

Incomplete Analysis

Because links between law and policy aren't documented, analyses are often incomplete, leading to missed deadlines and requirements.

THE SOLUTION

Centralized Regulatory Feed

Replaces expensive external counsel. Automatically aggregates and updates legal texts from official sources (EU & Dutch) in real-time. A single source of truth.

Automated Gap-Analysis

Instantly identifies differences between old and new texts. AI maps specific changes to internal policies to highlight exactly where compliance gaps exist.

Targeted Impact Alerts

Avoid generic news updates. Auditree provides a personalized radar that warns you only when a legislative change conflicts with your specific internal controls.

Traceable Compliance Report

Generate a one-click report proving coverage: linking every Legal Requirement directly to the corresponding Internal Policy section.

MARKET FOCUS

MARKET POTENTIAL

Targeting sectors hit hardest by the wave of new EU digital legislation.

Non-compliance leads to severe penalties and possible loss of license to operate, driving a high willingness to pay.

Insurance (Financial Services)

Facing strict requirements for operational resilience and risk management, where constant audit-readiness is mandatory.

Telecoms (Infrastructure)

Critical infrastructure providers subject to high cybersecurity standards and high-risk system protocols.
